

Full-text databases of the Research Library of Tomsk State University

To support academic and research activities of the university community (students, teachers, and other staff members), TSU purchases the access to remote network resources - Russian and international licensed databases.

Full-text databases (databases with full texts of documents or their extracts) include texts of books, academic bulletins, dissertations, patents, journal articles, information agencies' reports, and analytical reports of various organizations. Their volume and industry scope constantly grow. Currently, TSU RL can offer to its users access to more than 50 databases (including eLIBRARY, EAST VIEW, the RSL E-library of Dissertations, Elsevier, Springer, JSTOR, ProQuest, Garant, Kodeks, Techexpert, ConsultantPlus, etc.) with 150+ million full-text documents.

The E-library (repository) of TSU also contains the results of research and academic activities (academic books, thesis works and abstracts, TSU periodicals) and documents on local history (Siberian newspapers, rare books of the Tomsk region).

RL users may access e-resources outside of the TSU network.

The legal databases and the RSL E-library of Dissertations are accessible from RL workstations only.
